

Travelers World Map

The plate — tokens, marks and type for the MVP interface

The governing contrast is a ring against a filled dot: an empty hole, and a pin pushed into it. Everything else in this system is quiet so that one distinction can carry the product at a glance, at any zoom, in either theme.

The accent means visited and nothing else. No button, heading, link or chart uses it. The moment it decorates something, the map stops being readable at a glance — which is the one thing this interface has to do.

Cool neutrals with a slight cyan bias · spacing on a 4px base · radius 2px on controls and 4px on sheets · elevation is a hairline plus a low, wide shadow · 44 × 44 on every tap target, including pins

LIGHT	DARK	TOKEN AND WHAT IT IS FOR
		surface — page ground
		surface-raised — panels, sheets, cards
		surface-sunken — hover, wells, inactive tabs
		ink — primary text
		ink-muted — secondary text
		ink-faint — labels, hairlines, disabled
		land — landmass fill
		land-edge — coastlines, region outlines
		accent — visited. The pin.
		focus — keyboard focus ring

TYPE

Reykjavík

Body is 15–16px on a 1.5 line height, a measure near 65 characters, in a neutral grotesque. Everything read in sequence.
64.1466 -21.9426 · 100 in Iceland · 8 of 12 kinds

MARKS

- Settlement, not visited — the hole
- Settlement, visited — the pin
- Site place, not visited
- Site place, visited
- Also drilled on the printed map

Twelve kinds of place are shape and label, never colour. Twelve categorical colours cannot be made accessible, and would compete with the accent for meaning.

The three sheets — one pattern, three scopes, the same hide control on the page and in fullscreen

COUNTRY

Morocco

30 places · 10 marked · 4 regions

Morocco passport — visa not required

Wikipedia · Open in Maps

BY KIND — SEEN OF AVAILABLE

Imperial and historic capital	2 of 4
Living old town	3 of 6
Coast and sea	1 of 5
High mountain	0 of 3
Desert and steppe	0 of 4
Forest and jungle	0 of 1
Lake and river	1 of 2
Volcanic and geothermal	none here
Wildlife and wilderness	1 of 4
Sacred and pilgrimage	0 of 3
Rural and agrarian	0 of 5
Modern metropolis	2 of 3

Still unseen in Morocco: high mountain, desert and steppe, sacred and pilgrimage.

BY KIND — SEEN OF AVAILABLE

Imperial and historic capital	1 of 1
Living old town	2 of 2
Sacred and pilgrimage	0 of 2
Rural and agrarian	0 of 1
Modern metropolis	0 of 1
Lake and river	0 of 1

Still unseen here: sacred and pilgrimage, rural and agrarian, modern metropolis.

PLACES — BEST FIRST

Fes	100 in Morocco
Meknes	81 in Morocco
Volubilis	78 in Morocco
Moulay Idriss Zerhoun	64 in Morocco
Ifrane	52 in Morocco
Sefrou	47 in Morocco

The regions beside this one cover the rest of Morocco. Their union is the country's land. None of them is a printed tile, and a printed tile is never drawn in their place.

PLACE

Fes

Fès-Meknès, Morocco · 34.0331 -5.0003

STANDING — AGAINST THE BEST PLACE IN THE SAME COUNTRY

100 in Morocco

PILLARS, EACH AGAINST THE COUNTRY MAXIMUM

Built heritage

Natural setting

Living culture

WHY IT IS HERE

Two World Heritage inscriptions, a living medina, a national craft register, and a cuisine region carried by two independent sources.

WHEN TO GO

Not computed for this build. The row is hidden rather than filled with a guess.

ELSEWHERE

Open in Maps · OpenStreetMap · Wikipedia · Wikimedia Commons

Mark as visited

Add a note · Add to a trip · Show on the map

Every sheet answers the same two questions: what is here, and what have I not seen here? No percentage appears anywhere, and a score is never shown bare — it always names its country.

Mobile at 390 — the map is full-bleed and the sheet is the navigation

Everything routinely tapped sits in the lower two-thirds. The sheet never covers the selected pin — the map offsets to keep it visible. Layers, zoom and fullscreen sit top-right, seen but rarely needed, and none of them is the accent.

Layers, density and search — the three controls the proof of concept did not have

LAYERS

What is drawn

Our own land polygons

Geographic raster basemap

Street raster basemap

Web regions

Printed tile preview

Places

The two rasters are mutually exclusive basemaps and both default off — a commercial basemap is a per-load bill, and that is a cost decision, not a design one. Regions and places are overlays. The printed tile preview is a separate mode, never a fourth basemap.

DENSITY

How many places to show per country

12 per country

Ranked by country-relative score, then by name. The register and the map read the same cap.

Score is local to each country. Twelve places in Malta are not twelve places in Canada.

Distribution is per country, never a global top-N. A global top-N would be a world ranking, and this product does not have one.

SEARCH

Places, regions and countries

fes

RESULTS

Fes

place

Fès-Meknès

region

Sefrou

place

Moulay Idriss Zerhoun

place

Fes el-Bali

place

Choosing a hit opens the sheet. It does not move the camera. The camera moves only when the traveler asks it to.

An empty result restates the query in words and offers one action: clear the filters.

Show Fes on the map

None of these three is a view switch. A traveler turns on what they want drawn, decides how crowded the map should be, and searches without the camera moving underneath them.

Export — both dialogs always apply the current filters, and every alert is advisory

EXPORT — SPREADSHEET

Places in the current filter

Morocco · not visited · all kinds · 12 per country · Morocco passport

COLUMNS

name	score, with the country named
country	visited
region	visited_on
latitude	note
longitude	World Heritage inscriptions
kinds — labels, never codes	sources and place_id

ROWS

1,284 rows

Above 10,000 rows the file becomes slow to open. Narrow the filter, or export in two passes.

If rows are ticked in the register, the tick set is exported. Otherwise the filtered set is. The file is a real .xlsx, readable without this product.

Cancel

Export .xlsx

A dialog appears for export options and dimension warnings only. Marking a place never opens one.

EXPORT — PRINTABLE MAP

Poster of the current scope

Morocco · 30 places in scope · 4 regions · current filters applied

SIZE IN MILLIMETRES — SUGGESTED, AND YOURS TO CHANGE

400

500

Width × height. World suggests 700 × 500, a country 400 × 500, a region 300 × 300.

HOW MANY PLACES

30

All 30 in scope. A world export suggests 800.

ALERTS — ADVISORY, NEVER BLOCKING

Below A4: this will be a diagram, not a wall map.

Implied pin spacing under 4.5 mm: pins will overlap. Raise the size or lower the count.

The world at every place: the wall map uses 60 km spacing and about 2,500 drilled holes against a budget of 3,000. This export will not match it.

Output is PDF — vector land, type as text. The accent still means visited; everything unmarked prints as an open ring.

Cancel

Export PDF

Not how many countries you have been to.

Which kinds of place you have never been to.

Still unseen: desert and steppe, sacred and pilgrimage.

The same palette in dark. The accent is #DBA83E here and still means exactly one thing.

Rules the interface will not break

The accent means visited and nothing else.

No completion percentage for a country.

Never “archetype” and never a raw code in the interface.

Score is 0–100 against the top place in the same country.

Selecting never zooms. Marking never moves the camera.

Marking is one tap, and the same tap undoes it.

Nothing is hard-deleted. A note survives an unmark.

Forty-four pixels on every tap target, including pins.

No points, badges, streaks or leaderboards.

Kinds are shape and label, never twelve colours.

Absence is shown as absence, never filled with a guess.

A place identifier is a migration contract.

AND WHAT THIS MVP STILL DOES NOT DO

Native apps — the web must earn them.

Photo hosting — we link out.

Social feeds, leaderboards, a public profile.

Google Maps as the renderer.

Invented seasonality or travel effort.

Drawing a contested border.

Documents 1 to 5 hold the model, the product and the architecture. Section 12 of docs/REVIEW-POC-TO-MVP.md holds the ten stages, in order, each with the test that says it is finished.
